## **FOREWORD**

In this bulletin we discuss recent Wisconsin forest industry trends and report the results of a detailed study of the forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Wisconsin in 1996. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resources management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms for supplying information for this study and to the Wisconsin Department of Natural Resources for canvassing the respondents. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw log volumes reported in Scribner Decimal C scale by sawmills; a multiplier of 1.04 to all veneer log volume reported in Scribner Decimal C scale by veneer mills; a multiplier of 1.38 to all saw log volume reported in Doyle scale by sawmills; and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last published report from a detailed study of all industrial roundwood output in Wisconsin was in 1994. Most comparisons in this report are with the 1994 study results. Rows and columns may not sum due to rounding, but data in each table cell are accurately displayed.

# Wisconsin Timber Industry—An Assessment of Timber Product Output and Use, 1996

Ronald L. Hackett, Ronald J. Piva, and James W. Whipple

## HIGHLIGHTS

### PRIMARY TIMBER

### INDUSTRY—INDUSTRIAL

### ROUNDWOOD

- In 1996, Wisconsin's primary wood-using industry was comprised of 322 mills, not including 100 sawmills that each processed less than 50 thousand board feet in 1996 (table 1).
- Almost 90 percent of the State's primary wood-using mills are located in the Northeast, Northwest, and Central Forest Survey Units (fig. 1).
- Between 1994 and 1996, the total number of Wisconsin's primary wood-using mills decreased by eight mills. The number of sawmills decreased by 13 mills, while all other types of mills increased in number.
- In 1996, Wisconsin's primary wood-using industry processed more than 393 million cubic feet of roundwood—a decline of less than 1 percent since 1994 (table 2).

- Wisconsin's 22 pulp and particleboard mills processed nearly 261 million cubic feet of roundwood in 1996, less than 1 million cubic feet under the 1994 level. Pulpwood produced in 1996 was more than twice that processed by the numerous sawmills that year and accounted for two-thirds of the roundwood processed.
- Hardwoods made up nearly three-quarters of the roundwood processed by the State's primary wood-using industry in 1996.
- In 1996, 359.4 million cubic feet of industrial roundwood were harvested from Wisconsin's forests—a nearly 5-percent decrease from 1994 (table 3). Softwoods increased by nearly 1 percent between 1994 and 1996, while hardwoods decreased by over 6 percent.
- The increase in softwood production was associated with the increased use of the majority of softwoods in both saw logs and pulpwood. Softwood veneer log production actually decreased for most softwood species.

### About the Authors:

**Ronald L. Hackett,** Forester, received a B.S. in forest resources from the University of Minnesota. He joined the Forest Service in December 1974 and has been working with North Central Station's Forest Inventory and Analysis Unit since.

**Ronald J. Piva,** Forester, received a B.S. in forest management from the University of Missouri-Columbia. He joined the Forest Service in 1987 and has been working with the North Central Station's Forest Inventory and Analysis Unit since.

**James W. Whipple,** Wood Utilization Specialist, received his B.S. in forestry from Michigan Technological University in 1964. He joined the Wisconsin Department of Natural Resources as a field forester in July 1964 and has been a Utilization Specialist since 1970.

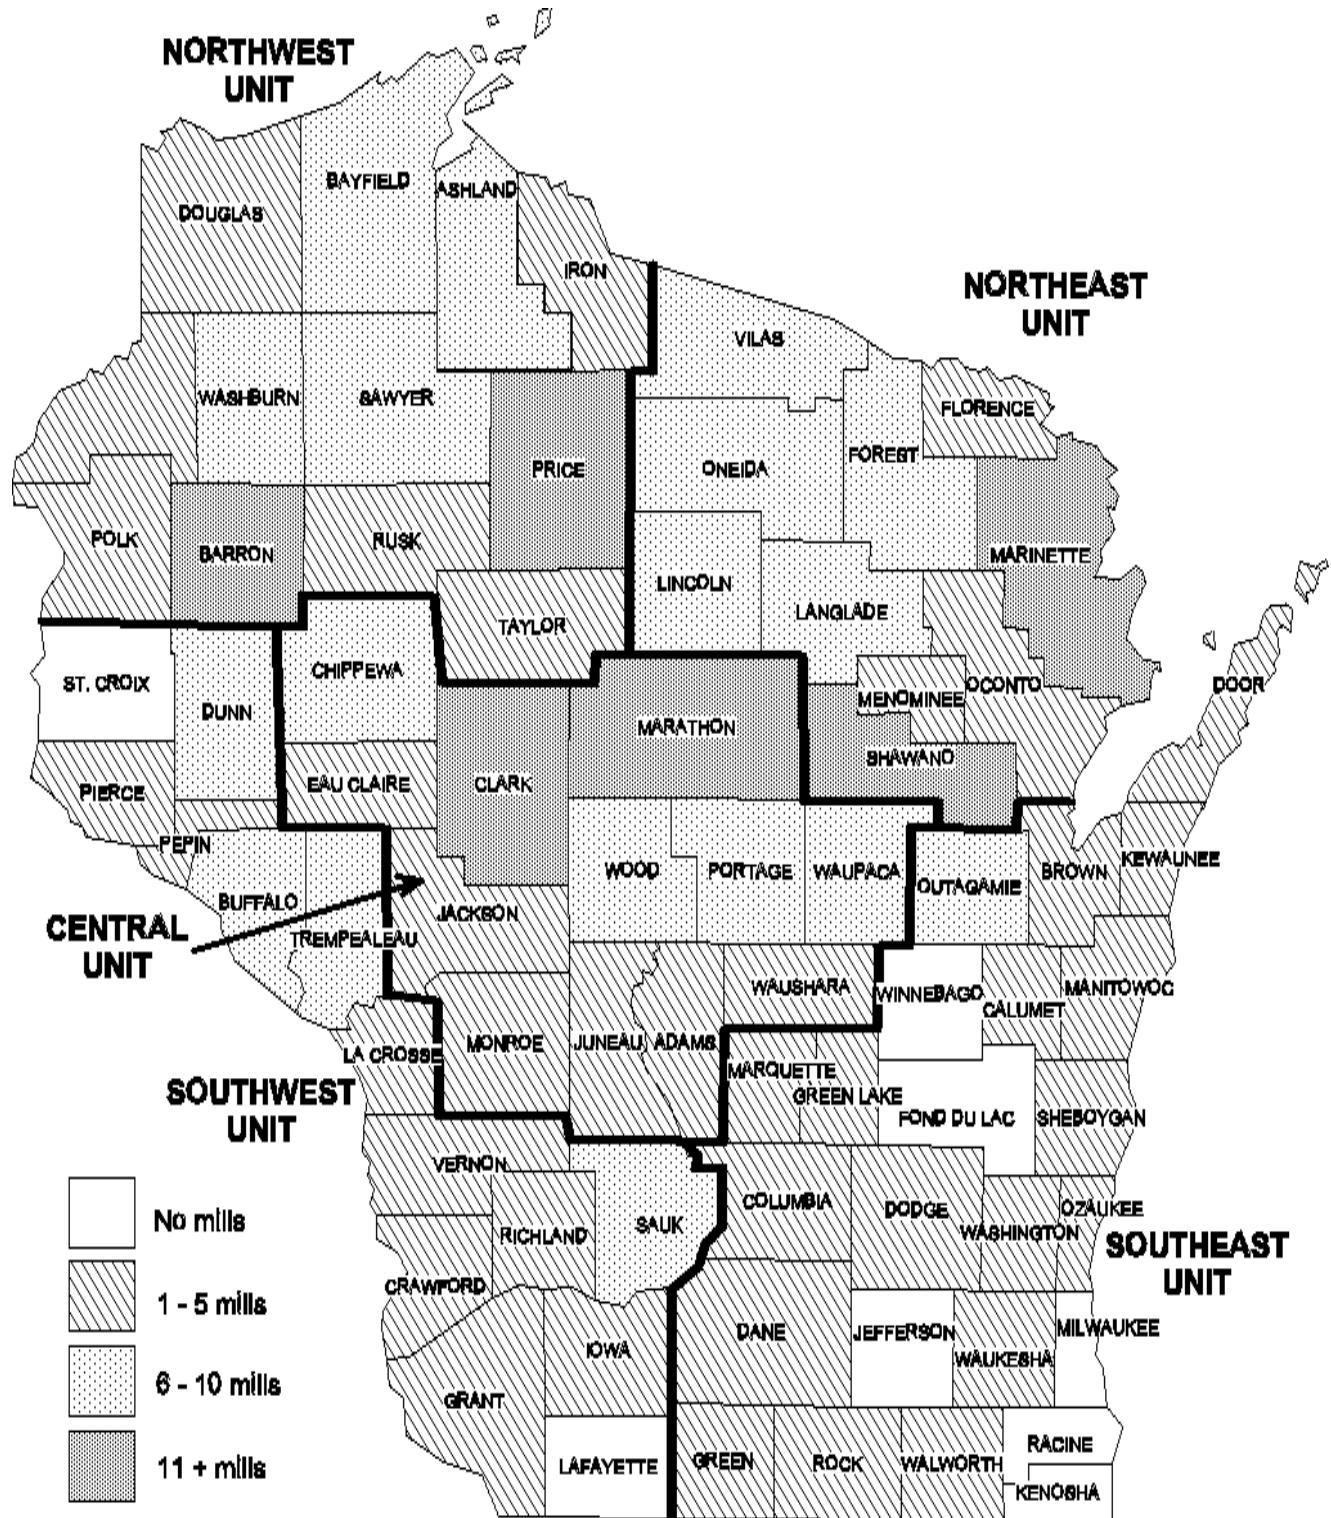

Figure 1.—Location and number of primary wood-using mills in Wisconsin, 1996.

- The decrease in hardwood production was associated with the decreased use of aspen and both the red oak and white oak groups in all the major uses and the decline in the volume of hardwood veneer logs between 1994 and 1996.
- Nearly two-thirds of the industrial roundwood produced went to the production of pulpwood products (fig. 2).
- The State's industrial roundwood production was concentrated in the two

northern Forest Survey Units, which together provided 70 percent of the State's 1996 production. The Central Unit provided another 20 percent of the industrial roundwood (fig. 3).

- Nearly all the industrial fuelwood (98 percent) and three-quarters of the pulpwood production came from the Northeast and Northwest Units combined. These two units also provided more than 67 percent of the veneer log production and more than 56 percent of the saw log production in the State.

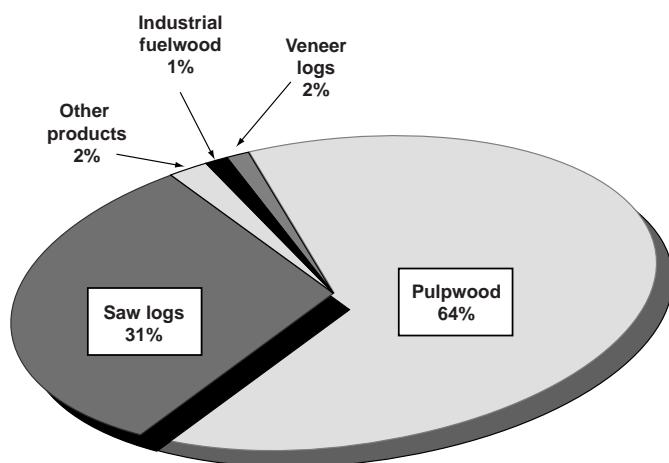

Figure 2.—Distribution of industrial roundwood production by product, Wisconsin, 1996.

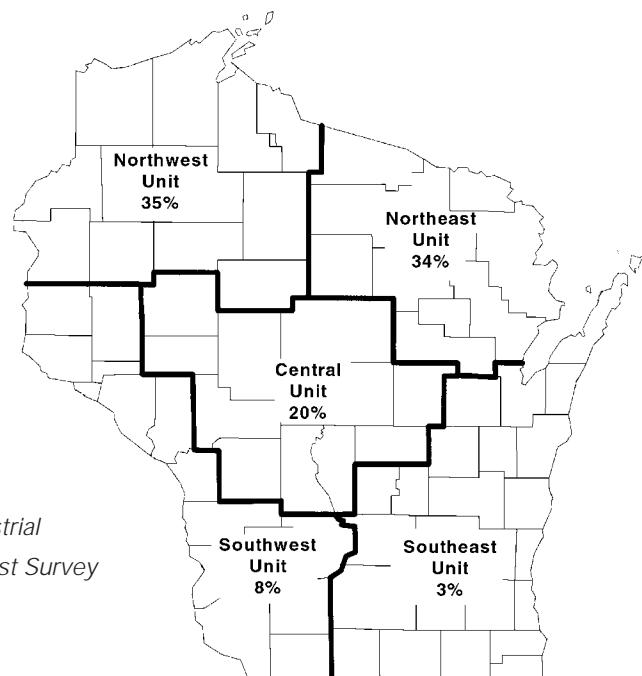

Figure 3.—Distribution of industrial roundwood production by Forest Survey Unit, Wisconsin, 1996.

## PULPWOOD

- Wisconsin's pulpwood production (including both roundwood and mill residues generated by the State's other primary wood-using industries) stayed between 3.0 and 3.5 million cords from 1988 to 1996 (table 4).
- In 1996, pulpwood production in Wisconsin totaled just over 3.3 million cords, a 5-percent decrease from 1995. Much of the decrease was concentrated in aspen and other hardwoods.
- Roundwood supplied nearly 90 percent of the pulpwood produced in 1996, and aspen supplied a little over one-third of the roundwood (fig. 4). The remainder of the wood material used for pulp products came from mill residues.

- Wisconsin's pulpwood and particleboard mills consumed more than 91 percent of the State's production of pulpwood (table 5). The remainder was shipped out of State for processing, mainly to Michigan.
- Aspen and white birch were the major species exported for pulpwood, accounting for more than 46 percent of the volume exported. The combined volume of all the softwood species accounted for only 23 percent of the volume exported.
- The Northwest Unit provided more than 41 percent of the roundwood pulpwood harvested in the State in 1996 (table 6).

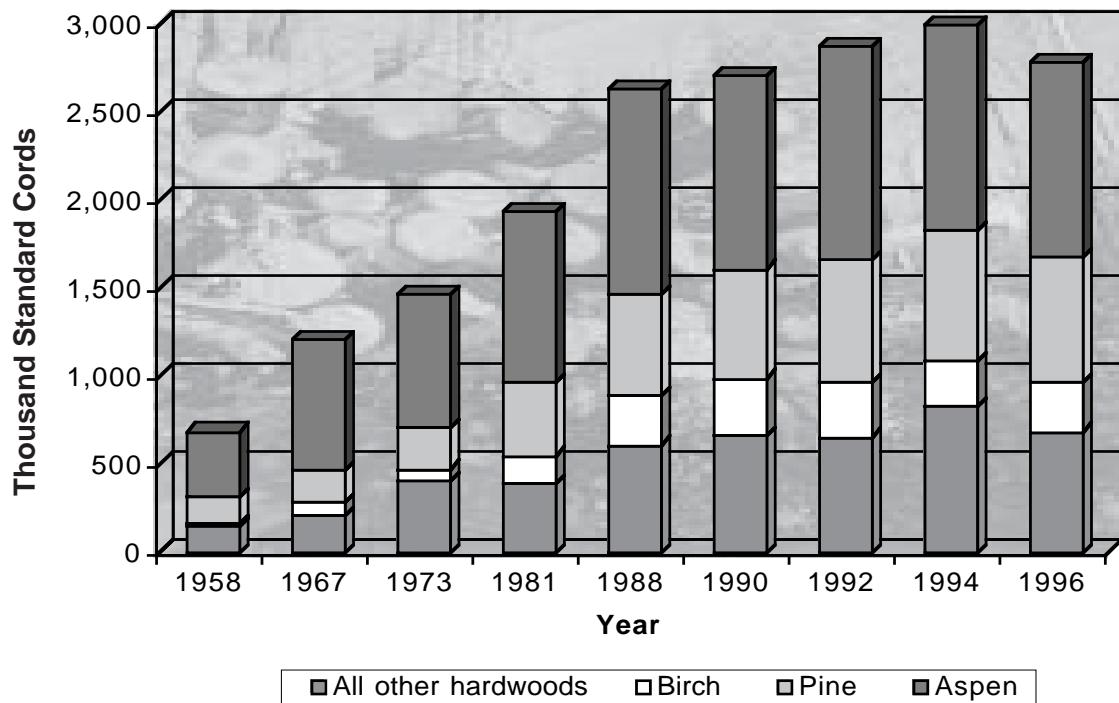

Figure 4.—Pulpwood production from roundwood by species group and survey year, Wisconsin.

- Two counties—Douglas and Bayfield—each reported more than 150 thousand cords of roundwood pulpwood harvested in 1996.
- Pulpwood receipts in 1996 totaled nearly 3.8 million cords, nearly the same as 1995 (table 7). Softwood roundwood and hardwood residue receipts increased, while hardwood roundwood and softwood residue receipts decreased.
- In 1996, roundwood pulpwood supplied nearly 88 percent of the pulpwood received; aspen and pine combined supplied 61 percent of the roundwood.
- Wisconsin supplied 80 percent of the pulpwood processed by its pulp and particleboard mills in 1996. The remainder was imported from other States and Canada. Minnesota supplied 47 percent of the pulpwood imported (table 8).
- Aspen, spruce, balsam fir, jack pine, and red pine were the main species imported to Wisconsin in 1996 (table 9). These five species accounted for 86 percent of the roundwood imported by Wisconsin pulp and particleboard mills in 1996.

## SAW LOGS

- Loggers delivered nearly 634 million board feet of Wisconsin saw logs to mills in Wisconsin, Michigan, Minnesota, and other States in 1996, down by almost 2 percent (11 million board feet) from 1994 (table 10). Most of the decrease was associated with red and white oak, ash, black cherry, aspen, and elm.
- Saw log receipts also decreased by less than 1 percent. Most of the decrease was associated with aspen, white oak, ash, and black cherry.
- Wisconsin sawmills processed more than 93 percent of the State's production of saw logs (table 11, fig. 5). The remainder was exported to Minnesota, Michigan, Iowa, and Illinois.

Pulpwood is a major industrial product in Wisconsin. A yearly study is done of all pulp mills and particleboard mills in the North Central Region. Separate publications with the results of these studies are available from the North Central Research Station.

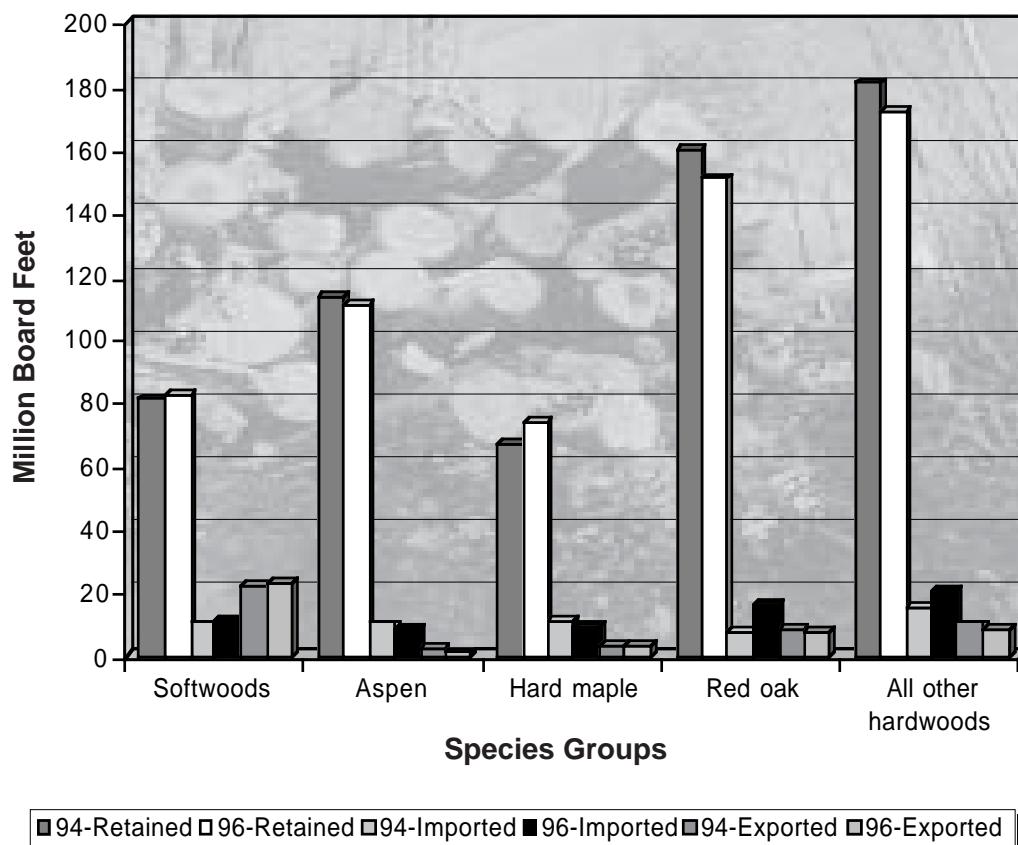

Figure 5.—Saw log production retained, imported, and exported (mills outside Wisconsin) by species groups, Wisconsin, 1994 and 1996.

- More than half of the saw logs exported from Wisconsin went to Minnesota. Michigan received a quarter of the saw logs exported from Wisconsin. Red pine, jack pine, and white pine accounted for nearly 99 percent of the saw logs shipped to Minnesota, while red oaks, hard maples, white birch, and aspen combined made up 76 percent of the saw logs sent to Michigan.
- The Northwest Unit of Wisconsin produced 85 percent of the saw log volume that was exported to Minnesota and Michigan. The Southwest Unit shipped nearly 10 million board feet of saw logs to Iowa and Illinois combined.
- The Northeast and Northwest Units together produced more than 56 percent of the State's saw logs (table 12).
- Major saw log producing counties with more than 20 million board feet each were Forest, Langlade, Marinette, and Menominee in the Northeast Unit and Bayfield, Rusk, and Sawyer in the Northwest Unit.
- Wisconsin supplied more than 90 percent of the saw log volume needed by its sawmills in 1996 (table 13). The remainder was imported, mainly from Michigan, Minnesota, Iowa, and Canada.

## VENEER LOGS

- Between 1994 and 1996, the volume of veneer logs harvested in Wisconsin decreased by more than one-third or almost 19 million board feet. During the same time period, veneer log receipts decreased by almost 13 percent or more than 7 million board feet (table 14).
- Softwood veneer log production declined by 86 percent between 1994 and 1996 and hardwood veneer log production declined by 34 percent (table 15). Veneer log receipts at mills in Wisconsin declined by 11 percent for softwoods and by 13 percent for hardwoods between 1994 and 1996.
- The Northwest and Northeast Units supplied more than two-thirds of the total veneer log volume produced.
- In 1996, Wisconsin mills processed 91 percent of the veneer logs harvested in the State (table 16, fig. 6). Michigan received 81 percent of the veneer logs exported from Wisconsin in 1996.
- Hard maple accounted for 57 percent of the volume of veneer logs exported from Wisconsin.
- Wisconsin supplied 59 percent of the State's veneer log requirements in 1996 (table 17). Imports from Michigan

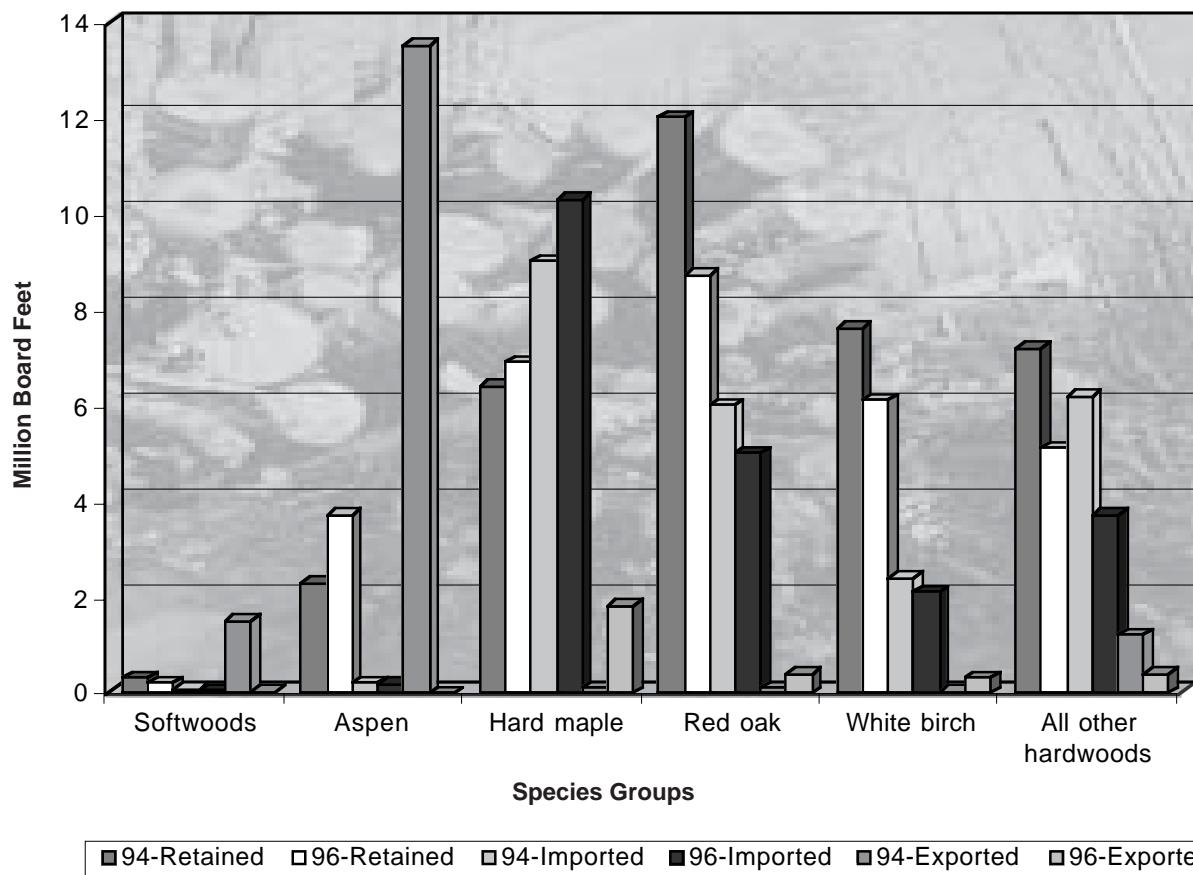

Figure 6.—Veneer log production retained, imported, and exported (mills outside Wisconsin), by species groups, Wisconsin, 1994 and 1996.

provided another 24 percent, and other States and Canada combined to provide the remaining 17 percent.

- Hard maple, red oak, and white birch made up 75 percent of the veneer log volume processed in the State in 1996. Almost 26 percent of these three species combined were imported from Michigan (table 18).

## OTHER PRODUCTS

- Industrial fuelwood from roundwood totaled more than 4.6 million cubic feet in 1996, near the same level as in 1994.
- All the industrial fuelwood production was from hardwood species, with aspen and red oak making up 99 percent of the total volume.
- The Northeast Unit produced the most industrial fuelwood in 1996, totaling 4 million cubic feet. The remaining 0.6 million cubic feet were harvested in the Northwest and Central Units.
- Cabin log production accounted for 663 thousand cubic feet of industrial roundwood in Wisconsin in 1996. More than 55 percent of cabin logs produced were red pine and 33 percent were white pine. The remaining 12 percent were northern white-cedar, hemlock, jack pine, balsam fir, and spruce.
- Northern white-cedar and red pine were the predominate species used in the production of posts and poles in Wisconsin in 1996.
- In 1996, nearly 4.1 million cubic feet of industrial roundwood was harvested in

Wisconsin for a variety of specialty products, including excelsior/shavings bolts, cooperage, and other miscellaneous products.

## TIMBER REMOVALS

- In the production of industrial roundwood in 1996, nearly 331 million cubic feet of Wisconsin's growing-stock inventory were removed from timberland, a 4-percent decrease from 1994 (table 19, fig. 7).
- More than 68 percent of the growing-stock removals came from the Northeast and Northwest Units, the region of the State where pulpwood production is concentrated (table 20).
- Aspen accounted for one-third of all growing-stock removals.
- Industrial roundwood harvesting also removed 1,007 million board feet of wood from the sawtimber portion of the growing-stock inventory in 1996 (table 21), a 4-percent decrease from 1994.
- Nearly 64 percent of all sawtimber removals occurred in the Northeast and Northwest Units.
- Sawtimber removals were concentrated in four species groups—aspен, red oak, hard maple, and red pine—which together made up more than two-thirds of all sawtimber removals. Aspen alone accounted for nearly one-third of all sawtimber removals.

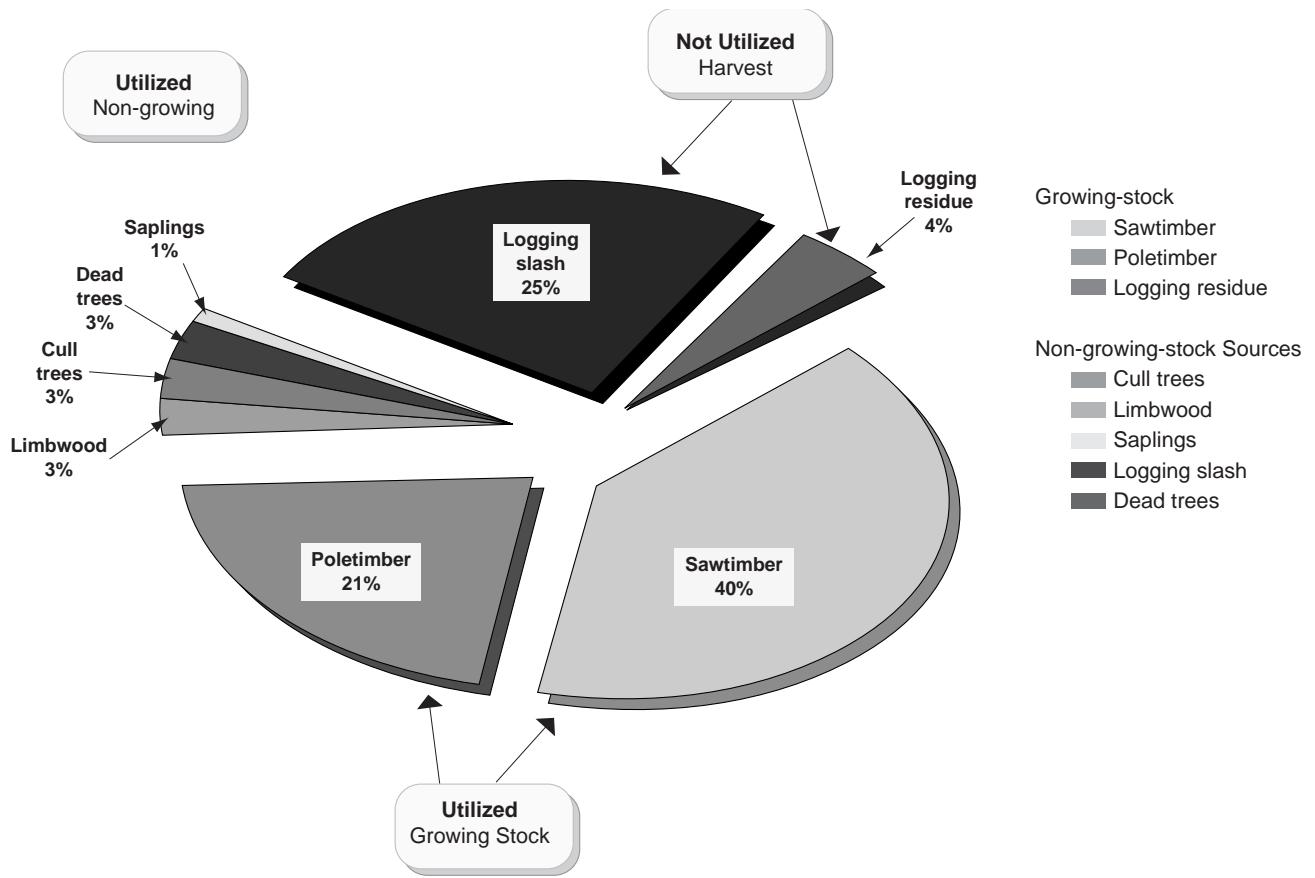

Figure 7.—*Distribution of timber removals for industrial roundwood by source of material, Wisconsin, 1996.*

## HARVEST RESIDUES

- In 1996, harvesting of industrial roundwood products left nearly 148 million cubic feet of harvest residues on the ground (table 22)—a 6-percent decrease from 1994—generally due to the decrease in harvest of saw logs and pulpwood in 1996.
- More than two-thirds of the harvest residues were left in the Northeast and Northwest Units, and the Central Unit accounted for another 20 percent.
- Four species groups—aspen, red oak, hard maple, and jack pine—accounted for over 60 percent of the harvest residues.

Residential fuelwood is a major nonindustrial product in Wisconsin. The results of a residential fuelwood study conducted in 1994 are available in Residential Fuelwood Consumption and Production in Wisconsin, 1994, RB-NC-172, by Dennis M. May and Terry Mace.

## PRIMARY MILL RESIDUES

- In converting industrial roundwood into milled products such as lumber, sheathing, and wood pulp, Wisconsin's primary wood-using industry generated just under 3.1 million green tons of wood and bark residues (table 23).
- Bark residues made up 41 percent of the residue produced at primary wood-using mills, followed by coarse residues at 32 percent and fine residues with the remaining 27 percent (fig. 8).
- Of the residues generated by Wisconsin mills in 1996, 54 percent were used for

industrial fuel and 23 percent were used for fiber products such as pulp and particleboard. Only 2 percent of mill residues were not used (fig. 9).

- In general, most coarse wood residues were used for fiber products, most fine residues were used for either fuel or other products such as mulch and litter, and most bark was burned as fuel or used as mulch.
- More than 60 percent of the mill residues were generated in the Central and Northeast Units, and more than 70 percent of all unused mill residues were located in the Central and Northwest Units.

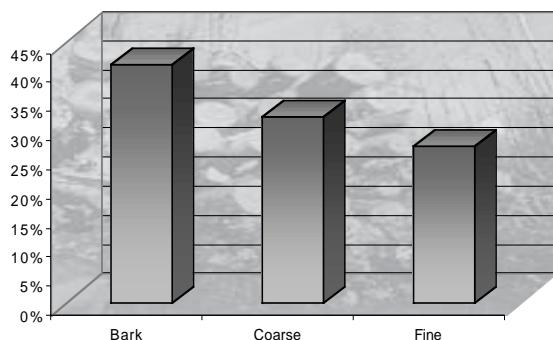

Figure 8.—*Distribution of residues generated by primary wood-using mills by type of residue, Wisconsin, 1996.*

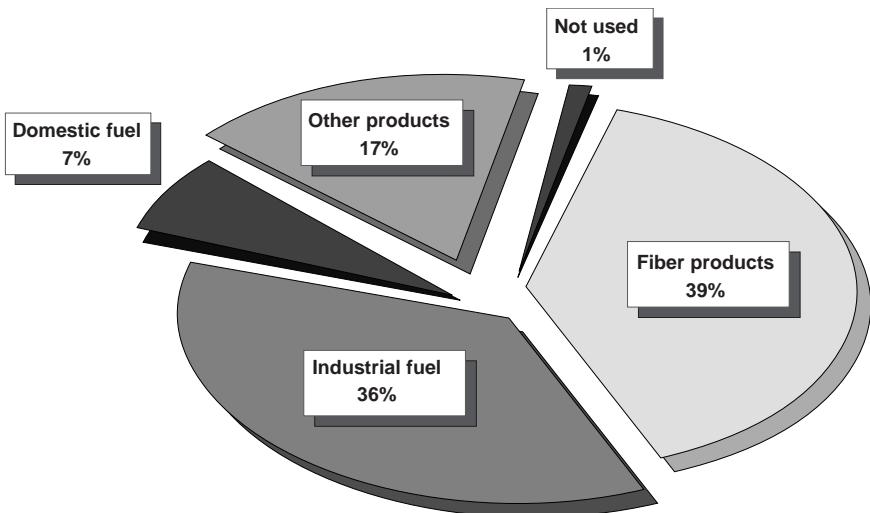

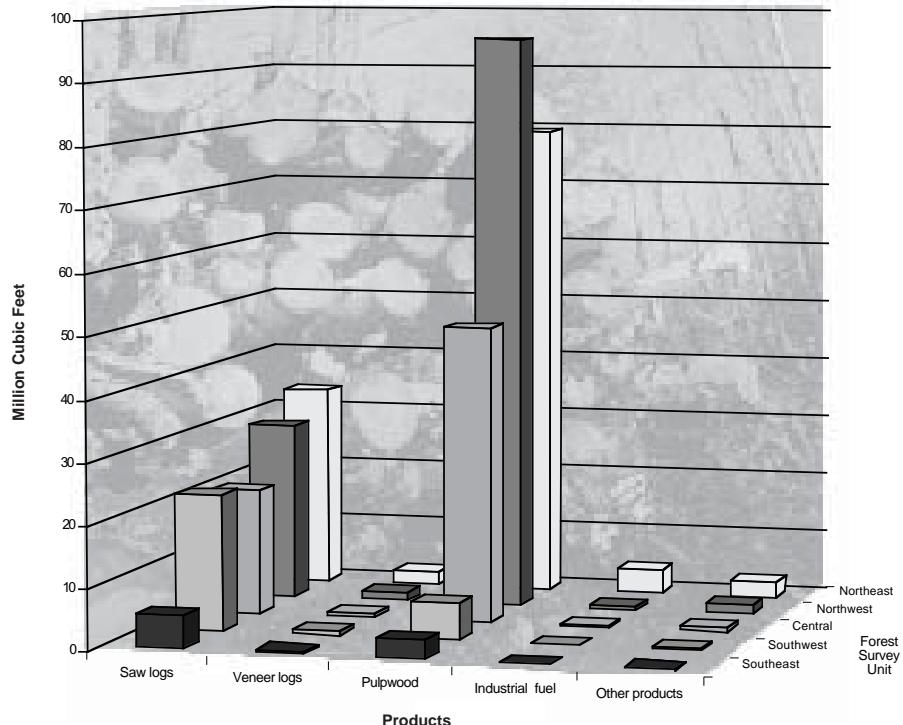

Figure 9.—*Distribution of residues generated by primary wood-using mills by method of disposal, Wisconsin, 1996.*

## REGIONAL TRENDS

### Northeast Unit

- In 1996, 121 million cubic feet of roundwood were produced in the 10 counties that make up the Northeast Unit of Wisconsin and accounted for more than one-third of the State's total output.
  - The 121 million cubic feet of industrial roundwood produced reflects a decline of more than 2 percent between 1994 and 1996. Softwood output increased by 7 percent in this Unit and hardwood output decreased by nearly 5 percent.
  - Pulpwood production, which accounts for nearly two-thirds of the Unit's total roundwood output, declined by 6 percent.
- Saw log production of nearly 192 million board feet accounted for more than one-fourth of the total roundwood production in this Unit, an increase of 5 percent from 1994.
  - The Northeast Unit produced 30 percent of the State's saw logs, 40 percent of the veneer logs, 34 percent of the pulpwood, 86 percent of the industrial fuelwood, and 46 percent of the roundwood used for other industrial roundwood products (fig. 10).
  - In 1996, the Northeast Unit had 85 sawmills (including mills that sawed less than 50 thousand board feet annually), 4 veneer mills, 3 pulp mills, 2 particleboard mills, and 11 other miscellaneous mills.
  - Nearly 55 percent of the sawmills in this Unit had receipts of less than 1 million board feet; 8 percent of the sawmills had receipts of more than 10 million board feet.

Figure 10.—Industrial roundwood production by product and Forest Survey Unit, Wisconsin, 1996.

## **Northwest Unit**

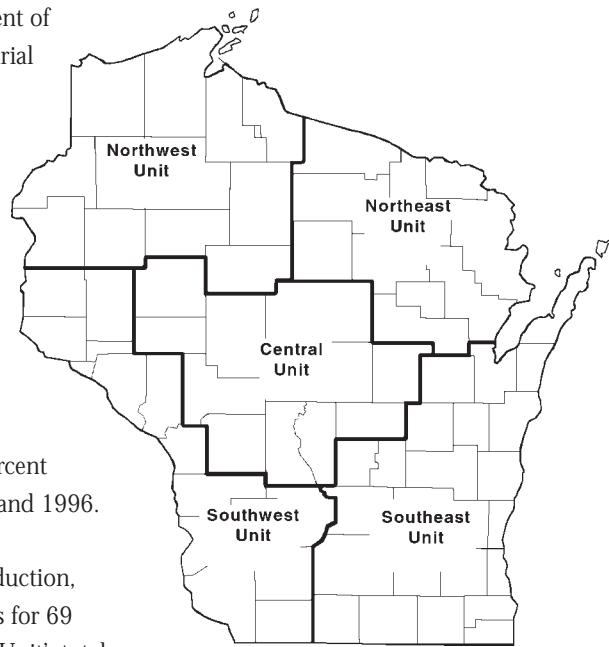

- The Northwest Unit remained the leading supplier of industrial roundwood in the State in 1996, producing 128 million cubic feet of industrial roundwood.
- This Unit had the second largest decrease —7 percent—in industrial roundwood production between 1994 and 1996.
- Roundwood harvested for pulp and particleboard production accounted for nearly three-quarters of the total roundwood produced in this Unit. The Northwest Unit supplied 40 percent of the State's roundwood produced for pulp and particleboard mills in 1996.
- Industrial roundwood production for saw logs increased from 164 million board feet in 1994 to 166 million board feet in 1996. The Northwest Unit was second behind the Northeast Unit in the production of industrial roundwood for saw logs in 1996.
- The Northwest Unit produced 26 percent of the State's saw logs, 27 percent of the veneer logs, 41 percent of the pulpwood, 12 percent of the industrial fuelwood, and 27 percent of the roundwood used for other industrial roundwood products.
- In 1996, the Northwest Unit had 66 sawmills (including mills that sawed less than 50 thousand board feet annually), 5 veneer mills, 3 pulp mills, 1 particleboard mill, and 9 other miscellaneous mills.

## **Central Unit**

- The Central Unit produced the third largest amount of industrial roundwood

in Wisconsin, supplying nearly 20 percent of the total industrial roundwood produced. In 1996, this Unit produced nearly 71 million cubic feet of industrial roundwood, a decline of 8 percent between 1994 and 1996.

- Pulpwood production, which accounts for 69 percent of this Unit's total roundwood output, declined by almost 4 percent.
- Saw log production declined by 15 percent, from 24 million cubic feet in 1994 to 21 million cubic feet in 1996. Softwood saw log production increased by 37 percent while hardwood saw log production decreased by more than 20 percent.
- The Central Unit produced 19 percent of the State's saw logs, 12 percent of the veneer logs, 21 percent of the pulpwood, 36 percent of the cabin logs, and 4 percent of the roundwood used for other industrial roundwood products.
- In 1996, the Central Unit had 83 sawmills (including mills that sawed less than 50 thousand board feet annually), 3 veneer mills, 9 pulp mills, 1 particleboard mill, and 2 other miscellaneous mills.
- More than 61 percent of the sawmills in this Unit had receipts of less than 1 million board feet; 31 percent of the sawmills had roundwood receipts between 1 and 5 million board feet.

### **Southwest Unit**

- In 1996, 30 million cubic feet of industrial roundwood were produced in the 14 counties that make up the Southwest Unit of Wisconsin, accounting for 8 percent of the State's total output.
- Industrial roundwood production in this Unit fell by less than 1 percent between surveys, declining by only 111 thousand cubic feet between 1994 and 1996.
- The Southwest Unit produced the largest volume of roundwood used for cooperage and was the second largest producer of posts in the State in 1996.
- The production of saw logs accounted for 75 percent of the total industrial roundwood produced in 1996 in this Unit, followed by pulpwood at 20 percent.
- In 1996, the Southwest Unit had 67 sawmills; of those, 31 processed between 1 and 5 million board feet and 5

processed more than 5 million board feet. There were also four miscellaneous product mills in this Unit.

### **Southeast Unit**

- The Southeast Unit produced the least amount of industrial roundwood in Wisconsin, contributing less than 3 percent of the total industrial roundwood produced in 1996.
- While all other Units had a decrease in industrial roundwood production between 1994 and 1996, production in the Southeast Unit increased by 10 percent.
- Saw logs accounted for 59 percent of the industrial roundwood produced in this Unit in 1996, followed by pulpwood at 35 percent.
- In 1996, the Southeast Unit had 54 sawmills, 3 veneer mills, 3 pulpmills, and 3 miscellaneous mills. Only seven of the sawmills processed more than 1 million board feet of roundwood.

## APPENDIX

### STUDY METHODS

This study was a cooperative effort of the Wisconsin Department of Natural Resources (WiDNR) and the North Central Research Station (NCRS). Using mail questionnaires supplied by NCRS and designed to determine the size and composition of Wisconsin's primary wood-using industry, its use of roundwood, and its generation and disposition of wood residues, the WiDNR canvassed all primary wood-using mills within the State. The WiDNR then followed up with non-responding mills through additional mailings, telephone calls, and personal contacts until it achieved a 100 percent response. Completed questionnaires were sent to NCRS for editing and processing.

As part of data editing and processing, all industrial roundwood volumes reported on the questionnaires were converted to standard units of measure using regional conversion factors. Timber removals by source of material and harvest residues generated during logging were estimated from standard product volumes using factors developed from logging utilization studies previously conducted by NCRS. Finalized data on Wisconsin's industrial roundwood receipts were loaded into a regional timber removals database and supplemented with data on out-of-State uses of Wisconsin's roundwood to provide a complete assessment of Wisconsin's timber product output.

### DEFINITION OF TERMS

#### **Board foot**

Unit of measure applied to roundwood. It relates to lumber that is 1 foot long, 1 foot wide, and 1 inch thick (or its equivalent).

#### **Bolt**

A short log no more than 8 feet long, to be sawn for lumber, peeled or sliced for veneer, shaved for excelsior, or converted into shingles, cooperage stock, dimension stock, blocks, blanks, etc.

#### **Central stem**

The portion of a tree between a 1-foot stump and the minimum 4.0-inch top

diameter outside bark or the point where the central stem breaks into limbs.

#### **Coarse mill residue**

Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

#### **Commercial species**

Tree species presently or prospectively suitable for industrial wood products. (Note: Excludes species of typically small size, poor form, or inferior quality such as hophornbeam, Osage-orange, and redbud.)

#### **Cull removals**

Net volume of rough and rotten trees, plus the net volume in sections of the

central stem of growing-stock trees that do not meet regional merchantability standards, harvested for industrial roundwood products.

#### **Dead removals**

Net volume of dead trees harvested for industrial roundwood products.

#### **Diameter at breast height (d.b.h.)**

The outside bark diameter at 4.5 feet above the forest floor on the uphill side of the tree. For determining breast height, the forest floor includes the duff layer that may be present, but does not include unincorporated woody debris that may rise above the ground line.

**Fine mill residue**

Wood residue not suitable for chipping such as sawdust and veneer clippings.

**Forest land**

Land at least 10 percent stocked by forest trees of any size, or formerly having had such tree cover, and not currently developed for nonforest use. (Note: Stocking is measured by comparing specified standards with basal area and /or number of trees, age or size, and spacing.) The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shelterbelt strips of timber must have a crown width of at least 120 feet to qualify as forest land. Unimproved roads and trails, streams or other bodies of water, or clearings in forest areas shall be classed as forest if less than 120 feet wide.

**Growing-stock removals**

The growing-stock volume removed from the timberland inventory by harvesting industrial roundwood products. (Note: Includes sawtimber removals, poletimber removals, and logging residues.)

**Growing-stock tree**

A live timberland tree of commercial species that meets specified standards of size, quality, and merchantability. (Note: Excludes rough, rotten, and dead trees.)

**Growing-stock volume**

Net volume of growing-stock trees 5.0 inches d.b.h. and over, from 1 foot above the ground to a minimum 4.0-inch top diameter outside bark of the

central stem or to the point where the central stem breaks into limbs.

**Hardwoods**

Dicotyledonous trees, usually broad-leaved and deciduous.

**Harvest residues**

Total net volume of unused portions of trees cut or killed by logging. (Note: Includes both logging residues and logging slash.)

**Industrial fuelwood**

A roundwood product, with or without bark, used to generate energy at manufacturing facilities and schools, correctional institutions, or electric generating plants.

**Industrial roundwood exports**

The quantity of industrial roundwood harvested in a geographical area and transported to other geographical areas.

**Industrial roundwood imports**

The quantity of industrial roundwood received from other geographical areas.

**Industrial roundwood products**

Saw logs, pulpwood, veneer logs, poles, commercial posts, pilings, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

**Industrial roundwood production**

The quantity of industrial roundwood harvested in a geographic area plus all industrial roundwood exported to other geographical areas.

**Industrial roundwood receipts**

The quantity of industrial roundwood received by commercial mills in a geographic area plus all industrial roundwood imported from other geographical areas.

**Industrial roundwood retained**

The quantity of industrial roundwood harvested from and processed by commercial mills within the same geographical area.

**International 1/4-inch rule**

A log rule or formula for estimating the board foot volume of logs, allowing 1/2 inch of taper for each 4-foot length. The rule appears in a number of forms that allow for kerf. In this form, 1/4 inch of kerf is assumed. This rule is used as the USDA Forest Service standard log rule in the Eastern United States.

**Limbwood removals**

Net volume of all portions of a tree other than the central stem (including forks, large limbs, tops, and stumps) harvested for industrial roundwood products.

**Logging residue**

Net volume of unused portions of the merchantable central stem of growing-stock trees cut or killed by logging.

**Logging slash**

Net volume of unused portions of the unmerchantable (non-growing stock) sections of trees cut or killed by logging.

**Merchantable sections**

Sections of the central stem of growing-stock trees that meet either pulpwood or saw log specifications.

**Net volume**

Gross volume less deductions for rot, sweep, or other defects affecting use for roundwood products.

**Noncommercial species**

Tree species of typically small size, poor form, or inferior quality that normally do not develop into trees suitable for industrial roundwood products.

Classified in volume tables as rough trees.

**Nonforest land**

Land that has never supported forests, and land formerly forested where use for timber management is precluded by development for other uses. (Note: Includes areas used for crops, active Christmas tree plantations, orchards, nurseries, improved pasture, residential areas, city parks, improved roads of any width and adjoining clearings, powerline clearings of any width, and 1- to 39.9-acre areas of water classified by the Bureau of the Census as land.) If intermingled in forest areas, unimproved roads and nonforest strips must be more than 120 feet wide and more than 1 acre to qualify as nonforest land.

**Nonforest land removals**

Net volume of trees on nonforest lands harvested for industrial roundwood products.

**Poletimber**

A growing-stock tree at least 5.0 inches d.b.h. but smaller than sawtimber size (9.0 inches d.b.h. for softwoods, 11.0 inches d.b.h. for hardwoods).

**Poletimber removals**

Net volume in the merchantable central stem of poletimber trees harvested for industrial roundwood products.

**Primary wood-using mills**

Mills receiving roundwood or chips from roundwood for processing into products such as lumber, veneer, and pulp.

**Primary wood-using mill residue**

Wood materials (coarse and fine) and bark generated at manufacturing plants that process industrial roundwood into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

**Rotten tree**

A tree that does not meet regional merchantability standards because of excessive unsound cull.

**Rough tree**

A tree that does not meet regional merchantability standards because of excessive sound cull. Includes noncommercial tree species.

**Roundwood**

Logs, bolts, or other round sections cut

from trees (including chips from roundwood).

**Sapling**

A live tree between 1.0 and 5.0 inches d.b.h.

**Sapling removals**

Net volume in saplings harvested for industrial roundwood products.

**Saw log portion**

That portion of the central stem of sawtimber trees between the stump and the saw log top.

**Saw log top**

The point on the central stem of sawtimber trees above which a saw log cannot be produced. The minimum saw log top is 7.0 inches diameter outside bark for softwoods and 9.0 inches diameter outside bark for hardwoods.

**Sawtimber removals**

As used in table 19, sawtimber removals refers to the net volume in the merchantable central stem of sawtimber trees harvested for industrial roundwood products. (Note: Includes the saw log and upper stem portions of sawtimber trees.) When referring to the sawtimber volume removed from the timberland inventory as in table 21, sawtimber removals refers to the net volume in the saw log portion of sawtimber trees harvested for roundwood products or left on the ground as harvest residue, and is usually expressed in thousands of board feet (International 1/4-inch rule).

**Sawtimber tree**

A growing-stock tree containing at least a 12-foot saw log or two noncontiguous saw logs 8 feet or longer and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches d.b.h. and hardwoods must be at least 11.0 inches d.b.h.

roundwood products under natural conditions, is not withdrawn from timber utilization by statute or administrative regulation, and is not associated with urban or rural development.

**Sawtimber volume**

Net volume in the saw log portion of sawtimber trees.

**Tree**

A woody plant usually having one or more perennial stems, a more or less definitely formed crown of foliage, and a height of at least 12 feet at maturity.

**Softwoods**

Coniferous trees, usually evergreen, having needles or scale-like leaves.

**Upper stem portion**

That portion of the central stem of sawtimber trees between the saw log top and the minimum top diameter of 4.0 inches outside bark, or to the point where the central stem breaks into limbs.

**Timber product output**

The volume of roundwood products produced from an area's forests.

**Timberland**

Forest land that is producing, or is capable of producing, in excess of 20 cubic feet per acre per year of industrial

**Veneer log**

A log or bolt used in the production of plywood, finished panels, containers, or veneer sheets, both rotary cut and sliced.

## COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

### SOFTWOODS

#### Pine

Jack pine .....	<i>Pinus banksiana</i>
Red pine .....	<i>Pinus resinosa</i>
Eastern white pine .....	<i>Pinus strobus</i>

#### Spruce

White spruce .....	<i>Picea glauca</i>
Black spruce .....	<i>Picea mariana</i>
Balsam fir .....	<i>Abies balsamea</i>
Eastern hemlock .....	<i>Tsuga canadensis</i>
Tamarack .....	<i>Larix laricina</i>
Northern white-cedar .....	<i>Thuja occidentalis</i>
Eastern redcedar .....	<i>Juniperis virginiana</i>

### HARDWOODS

#### White oak

White oak .....	<i>Quercus alba</i>
Bur oak .....	<i>Quercus macrocarpa</i>
Chinkapin oak .....	<i>Quercus muehlenbergii</i>
Swamp white oak .....	<i>Quercus bicolor</i>

#### Red oak

Northern red oak .....	<i>Quercus rubra</i>
Black oak .....	<i>Quercus velutina</i>
Northern pin oak .....	<i>Quercus ellipsoidalis</i>

#### Hickory

Bitternut hickory .....	<i>Carya cordiformis</i>
Pignut hickory .....	<i>Carya glabra</i>
Shagbark hickory .....	<i>Carya ovata</i>

#### Birch

White birch .....	<i>Betula papyrifera</i>
Yellow birch .....	<i>Betula alleghaniensis</i>

Hard maple	
Black maple .....	<i>Acer nigrum</i>
Sugar maple .....	<i>Acer saccharum</i>
Soft maple	
Red maple .....	<i>Acer rubrum</i>
Silver maple .....	<i>Acer saccharinum</i>
American beech .....	<i>Fagus grandifolia</i>
Ash	
Black ash .....	<i>Fraxinus nigra</i>
White ash .....	<i>Fraxinus americana</i>
Green ash .....	<i>Fraxinus pennsylvanica</i>
Balsam poplar .....	<i>Populus balsamifera</i>
Aspen	
Bigtooth aspen .....	<i>Populus grandidentata</i>
Quaking aspen .....	<i>Populus tremuloides</i>
Eastern cottonwood .....	<i>Populus deltoides</i>
American basswood .....	<i>Tilia americana</i>
Black walnut .....	<i>Juglans nigra</i>
Elm	
American elm .....	<i>Ulmus americana</i>
Rock elm .....	<i>Ulmus thomasii</i>
Slippery elm .....	<i>Ulmus rubra</i>
Other hardwoods	
Northern catalpa .....	<i>Catalpa speciosa</i>
Black cherry .....	<i>Prunus serotina</i>
River birch .....	<i>Betula nigra</i>
Black locust .....	<i>Robinia pseudoacacia</i>
Honeylocust .....	<i>Gleditsia triacanthos</i>
Red mulberry .....	<i>Morus rubra</i>
Butternut .....	<i>Juglans cinerea</i>
Black willow .....	<i>Salix nigra</i>
Boxelder .....	<i>Acer negundo</i>
Hackberry .....	<i>Celtis occidentalis</i>

Table 19.—Wood material harvested for industrial roundwood by Forest Survey Unit, species group, and source of material, Wisconsin, 1996

Table 20.—Growing-stock removals from timberland for industrial roundwood by Forest Survey Unit, county, and species group, Wisconsin, 1996

Table 21.—Sawtimber removals from timberland for industrial roundwood by Forest Survey Unit, county, and species group, Wisconsin, 1996

Table 22.—Harvest residues generated by industrial roundwood harvesting by Forest Survey Unit, county, and species group, Wisconsin, 1996

Table 23.—Residue produced at primary wood-using mills by Forest Survey Unit, type of use, and residue type, Wisconsin, 1996

## **TABLES**

Table 1.--Number of active primary wood-using mills by mill type in Wisconsin, 1981, 1986, 1988, 1990, 1992, 1994, 1996

Mill type	1981	1986	1988	1990	1992	1994	1996
Sawmills <sup>1</sup>							
Large <sup>2</sup>	23	21	32	27	33	39	34
Medium <sup>3</sup>	110	103	92	102	106	111	106
Small <sup>4</sup>	140	142	131	139	114	118	115
Total	273	266	255	268	253	268	255
Pulp mills <sup>5</sup>	23	21	22	22	21	21	22
Veneer mills	15	15	17	17	12	12	15
Other mills <sup>6</sup>	12	15	15	16	25	29	30
Total	323	317	309	323	311	330	322

<sup>1</sup> Mills persistently sawing 50 thousand board feet or more annually. (100 mills sawed under 50 thousand board feet per year.)

<sup>2</sup> Annual lumber production in excess of 5 million board feet.

<sup>3</sup> Annual lumber production from 1 million to 5 million board feet.

<sup>4</sup> Annual lumber production from 50 thousand to 1 million board feet.

<sup>5</sup> Includes particleboard plants, i.e., oriented strandboard, waferboard, etc.

<sup>6</sup> Includes specialty mills, i.e., excelsior/shavings, posts and poles, cabin logs, etc.

Table 2.--*Industrial roundwood receipts by mill type in Wisconsin, 1981, 1986, 1988, 1990, 1992, 1994, 1996*

(In million cubic feet)

ALL SPECIES							
Mill type	1981	1986	1988	1990	1992	1994	1996
Pulp mills <sup>1</sup>	208.7	224.0	226.1	235.7	248.1	261.4	260.6

\* = Less than 1/2 unit of measure.

<sup>1</sup> Based on factors obtained from the Wisconsin Utilization Study, 1994.<sup>2</sup> Thousand board feet, International 1/4-inch rule.<sup>3</sup> Thousand cubic feet.<sup>4</sup> Standard cords are 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

Rows and columns may not sum due to rounding.

\* = Less than 500 cords.

<sup>1</sup> Standard cords are 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.<sup>2</sup> Includes logs, bolts, and wood residue used in manufacturing particleboard and waferboard after 1979.

Rows and columns may not sum due to rounding.

\* = Less than one standard cord

<sup>1</sup> Standard cords are 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.<sup>2</sup> Includes only those counties that supplied pulpwood in 1996.

Rows and columns may not sum due to rounding.

Table 7.--Pulpwood receipts by year, product form, and species group, Wisconsin, 1946-1996

## **MISSION STATEMENT**

---

We believe the good life has its roots in clean air, sparkling water, rich soil, healthy economies and a diverse living landscape. Maintaining the good life for generations to come begins with everyday choices about natural resources. The North Central Research Station provides the knowledge and the tools to help people make informed choices. That's how the science we do enhances the quality of people's lives.

For further information contact:

North Central Research Station  
USDA Forest Service  
1992 Folwell Ave.  
St. Paul, MN 55108

Or visit our web site:

[www.ncrs.fs.fed.us](http://www.ncrs.fs.fed.us)

The Forest Inventory and Analysis web site is:  
[www.fia.fs.fed.us](http://www.fia.fs.fed.us)

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410, or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.

2002. **Wisconsin timber industry—an assessment of timber product**

**output and use, 1996.** Resour. Bull. NC-201. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Research Station. 74 p.

Discusses recent Wisconsin forest industry trends; production and receipts of pulpwood, saw logs, and veneer logs; and production of other timber products in 1996. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of mill residues.

KEY WORDS: Industrial roundwood, pulpwood, saw logs, veneer logs, residue
